

CONTEXT DOCUMENT

Project Name

Trevolk AI Workforce

Project Overview

Trevolk AI Workforce is a modern SaaS platform that enables businesses to hire specialized AI Employees capable of handling repetitive business operations such as sales, customer support, appointment scheduling, and customer follow-ups. Instead of functioning as a simple chatbot, each AI Employee acts as a digital team member with specific responsibilities, workflows, memory, business rules, and integrations.

The platform is designed as a modular AI Workforce where multiple AI Employees work together under a single business workspace while sharing the same backend, frontend, authentication system, database, AI engine, and infrastructure.

Vision

Build the most intelligent AI Workforce platform that allows businesses of all sizes to automate repetitive operations through specialized AI Employees while maintaining a simple, modern, and enterprise-grade user experience.

Mission

Help businesses save time, reduce operational costs, improve customer experience, and increase revenue by replacing repetitive manual work with intelligent AI Employees.

Core Product

This project is not a chatbot.

This project is an AI Workforce Platform.

Businesses can activate multiple AI Employees depending on their needs.

The initial MVP includes:

- AI Sales Employee
- AI Customer Support Employee
- AI Receptionist

- AI Follow-up Employee

Future versions may include:

- AI HR Employee
 - AI Marketing Employee
 - AI Finance Employee
 - AI Operations Employee
 - AI Recruitment Employee
-

Target Market

Primary Target Customers:

- E-commerce Businesses
- Digital Agencies
- Software Houses
- Online Coaches & Educators
- Real Estate Agencies

Future Expansion:

- Clinics
 - Restaurants
 - SMEs
 - Enterprises
-

Target Users

Business Owners

Sales Teams

Customer Support Teams

Operations Managers

Marketing Teams

Startup Founders

Business Problems We Solve

Businesses often struggle with:

- Slow customer response times
- Lost leads
- Missed follow-ups
- Manual appointment booking
- Repetitive customer questions
- Poor customer experience
- Inefficient internal workflows

The platform should solve these problems through intelligent AI Employees.

AI Employees

AI Sales Employee

Responsibilities:

- Qualify leads
- Answer pre-sales questions
- Schedule meetings
- Update CRM
- Notify sales teams

AI Customer Support Employee

Responsibilities:

- Answer FAQs
- Handle customer inquiries
- Track orders
- Manage complaints
- Process returns requests
- Escalate to humans when necessary

AI Receptionist

Responsibilities:

- Book appointments
- Manage calendars
- Reschedule meetings
- Send reminders
- Handle availability

AI Follow-up Employee

Responsibilities:

- Lead follow-ups
- Proposal reminders
- Abandoned cart recovery
- Customer re-engagement
- Automated email & WhatsApp campaigns

Product Type

Modern SaaS Platform

Cloud Based

Multi-Tenant

AI Powered

Subscription Based

Business Model

Software as a Service (SaaS)

Monthly Subscription

Annual Subscription

Enterprise Plans

Future Marketplace for AI Employees

Design Philosophy

The design should feel modern, premium, and enterprise-ready.

Focus on:

- Minimalism
- Simplicity
- High readability
- Excellent user experience
- Clean layouts
- Large spacing
- Smooth navigation
- Professional aesthetics
- Fast interactions

Avoid unnecessary visual clutter.

UI Style

Modern Enterprise SaaS

Clean Dashboard

Professional Layout

Soft Rounded Corners

Minimal Glass Effects

Elegant Micro Animations

Responsive Design

Accessibility Focused

Color Palette

Primary Background:
Dark Charcoal

Primary Accent:
Blue

Secondary Accent:
Sky Blue

Text:
White / Light Gray

Success:
Green

Warning:
Orange

Danger:
Red

The interface should remain elegant and professional rather than colorful or playful.

Animation Philosophy

Animations should improve usability rather than distract users.

Use:

- Smooth page transitions
- Skeleton loading screens
- Card hover effects
- Soft fade animations
- Button micro-interactions
- Smooth sidebar transitions
- Typing indicators
- Progressive loading

Avoid excessive motion or flashy effects.

Technology Stack

Frontend

- React
- Next.js
- TypeScript
- Tailwind CSS

Backend

- Node.js
- Express.js (or NestJS if required)

Database

- PostgreSQL

ORM

- Prisma

Authentication

- Clerk or Supabase Auth

AI

- OpenAI
- Gemini
- Claude
- Groq

Memory

- PostgreSQL + Vector Database (future)

Integrations

- WhatsApp
- Gmail
- Google Calendar
- Stripe
- Slack
- Shopify
- HubSpot

Deployment

- Docker
 - VPS / Cloud
-

Architecture Principles

One unified application.

One frontend.

One backend.

One authentication system.

One database.

One AI engine.

One dashboard.

Each AI Employee should exist as a separate module while sharing common infrastructure.

Avoid duplicate code.

Design for scalability and maintainability.

Product Goals

Create an enterprise-grade AI Workforce platform that is scalable, modular, maintainable, and production-ready from the beginning.

Every feature, screen, workflow, and technical decision should align with this vision.

This document should be treated as the single source of truth for all future planning, UI design, backend architecture, AI workflows, database design, and implementation.
